What is claimed is:

5

10

15

20

1. A method for structuring a homogeneous electrode for an organic light-emitting display, the method comprising:

expanding a laser beam to cover each target portion of each electrode to be ablated, to form periodic electrode structures; and

ablating respective target portions of the homogeneous electrode using the expanded laser beam.

- 2. The method of claim 1, wherein the periodic electrode structures are linear structures.
- 3. The method of claim 1, wherein the electrode is at least one of a cathode and an anode.
- 4. The method of claim 1, wherein the laser beam is a pulse laser with a pulse duration of 20 ns or less.
- 5. The method of claim 4, wherein the pulse laser is an ultraviolet laser, an infrared laser, or a visible laser.

- 6. The method of claim 4, wherein the pulse laser is a 248 nm KrF excimer laser.
- 7. The method of claim 1, wherein the homogeneous electrode is coated with a material for facilitating absorption of the laser beam prior to the ablation.

5

15

- 8. The method of claim 7, wherein the material for facilitating absorption is graphite.
- 9. The method of claim 1, wherein the step of expanding a laser beam comprises expanding the laser beam to cover each target portion of each electrode to be ablated using an optical unit.
 - 10. The method of claim 1, wherein the step of expanding a laser beam further comprises widening the laser beam to cover each target portion of each electrode to be ablated using an optical unit.
 - 11. The method of claim 1, wherein the laser beam is expanded such that a width of the laser beam is widened to cover each target portion of each electrode to be ablated.
- 12. An apparatus for structuring a homogeneous electrode for an organic light-emitting display using ablation of a laser beam to form periodic electrode structures, the apparatus comprising:

a laser light source for emitting the laser beam; and
an optical unit for expanding the laser beam so that the laser beam covers each target

portion of each electrode to be ablated.

- 13. The apparatus of claim 12, wherein the optical unit has a gap.
 - 14. The apparatus of claim 12, wherein the optical unit has a plurality of gaps.
 - 15. The apparatus of claim 12, wherein the optical unit comprises:
 - a beam homogenizer,
 - a gap; and

- at least one cylindrical lens.
- 16. The apparatus of claim 12, further comprising an exhaust unit.
 - 17. The apparatus of claim 12, further comprising an outlet vent.
 - 18. The apparatus of claim 17, further comprising an exhaust unit.
 - 19. The apparatus of claim 12, wherein the electrode is a cathode or an anode.

20. The apparatus of claim 12, wherein the optical unit for expanding the laser beam expands a width of the laser beam to cover each target portion of each electrode to be ablated.
